About Me

I'm a VFX-Post supervisor with experience managing teams, clients and complex projects. My background in software development, tech, photography, 3D and storytelling allow me visualise the best approach to complete the project or to find the best problems solution. I'm fuelled by passion for storytelling, movies and thrilling visuals. My constant skills growing and determination led me to BBC Studios where I had the opportunity to work on Our Blue Planet and Seven Worlds series, improving the productivity of the team with the innovative cloud post-production platform Athera (The Foundry). I believe a strong problem solving is the key to success for any kind of project. I'm currently working as freelance VFX-Post supervisor and I'm always interested in new challenges.

SKILLS

- > Establish efficient workflows, technical pipeline and methodologies
- > Deliver VFX projects from conception through to completion
- > Achieving the creative aims of the Director
- > Creatively leading artists and setting the expectation for the highest level
- > Attending filming sets and deal with the technical and logistical issues
- > Achieving the look within the technical parameters, scale and scope of the production schedule/budget
- > Take initiative to resolve pipeline issues by researching, identifying and implementing solutions
- > Keep Managers and the Production Team informed of progress, changes, roadblocks and other critical issues
- > Creative and technical problem solving
